

Lypossage

A new all-body contouring treatment that will help reshape your figure without invasive surgery.

Figure imbalances like cellulite and bulges on the thighs or abdomen respond readily to Lypossage. If you've been frustrated when trying to "spot reduce" areas of your body, you'll be delighted with the results of this unique treatment.

Best of all, Lypossage will help you feel as good as you look!

Why do I have cellulite, lumps and bulges?

The fatty tissue of your body acts as its "toxic waste disposal site", where substances that it cannot metabolize are dumped. This congested tissue has poor blood circulation.

Where does this technique come from?

The treatment is a specific blend of massage and modalities that derive from physical therapy, including lymphatic drainage and deep tissue release. It was created by Charles W. Wiltsie III, a nationally recognized massage therapy educator and practitioner. Mr. Wiltsie conducted a year long study of 100 female subjects that documented the effectiveness of the technique. In the study, notable results included an average inch loss per thigh of almost 1 ½ inches.

How does it work?

Lypossage cleanses the body of stagnant, stalled lymphatic fluid (lymph oedema) that can create the lumps and bulges we know as figure imbalance. The deeper Lypossage strokes break up adhesions under the skin that can contribute to the dimpled, uneven appearance of cellulite. Lypossage also tones the muscles, lifting and firming sagging tissue.

What parts of the body respond to Lypossage?

Lypossage is performed on the lower body, including the buttocks, hips, thighs and lower abdomen, as well as the upper body, including the arms, and the face, neck and head. Lypossage has some of its most dramatic effects on areas prone to sagging, such as the lower face and neck, as well as the buttocks and upper thighs.

Is it safe?

Lypossage is a non-invasive, natural health treatment that helps to cleanse the body of toxins and retained fluids. Most clients find that Lypossage enhances their energy and mental clarity. While there are some contraindications for specific medical conditions, Lypossage can be safely experienced by most health individuals. It is much safer than surgical procedures such as liposuction. However, for those who opt for a more dramatic surgical result, Lypossage can be very beneficial before and after liposuction.

What are some typical results and how will I know what mine are?

It is not uncommon to find cumulative inch loss of up to 11". Most women find that they will drop one to two dress sizes without a reduction in their weight. Your Lypossage practitioner will weigh, photograph and measure you before you begin our program and at key intervals to enable you to track your progress.
